Summary

AI & Backend Engineer specializing in autonomous LLM-driven systems and large-scale validation pipelines. Experienced in designing deterministic architectures for non-deterministic models, transforming multi-week manual workflows into CI-integrated AI automation systems.

Skills

Languages:
Python, JavaScript, TypeScript

Backend:
FastAPI, Flask, Django, Node.js, NestJS, REST APIs, Async processing

AI Systems:
Multi-agent orchestration, RAG architectures, Hybrid retrieval, Deterministic generation strategies, Context-drift mitigation

LLM Platforms:
OpenAI, Anthropic Claude, Local LLMs

Search & Indexing:
Azure AI Search, GraphRAG, LEANN, ChromaDB, PGVector

Databases:
PostgreSQL, Redis, MongoDB

Infrastructure:
Docker, Kubernetes, AWS, CI/CD, Linux

Experience

Beyondsoft | *AI Systems Engineer* | August 2025 - Present | Ho Chi Minh, Viet Nam

- Architected and implemented an autonomous multi-agent system that converts Microsoft Graph documentation into 135+ executable test suites covering 200+ API endpoints
- Designed document simplification and structured extraction pipelines to transform unstructured technical specifications into deterministic backend logic
- Built stabilization layers (review agents, validation agents, endpoint inspection agents) to mitigate LLM context drift and ensure long-term reproducibility
- Engineered a daily CI-integrated pipeline where AI agents generate code, execute validation, and raise pull requests for human approval
- Reduced manual QA execution from 3–4 engineers over two weeks to a single-day autonomous run
- Contributed to Microsoft Graph API validation strategy through direct collaboration with Microsoft engineering teams

Microsoft Regulatory Intelligence Platform (Sole Engineer)

- Sole engineer responsible for designing and building a regulation-focused RAG system with paragraph- and page-level citation grounding
- Implemented multi-mode retrieval architecture (lexical, semantic, hybrid, compact hybrid search) with pluggable index backends (GraphRAG, LEANN, ChromaDB, Azure AI Search)
- Optimized chunking, embedding, and reranking strategies to achieve 96% benchmark retrieval accuracy (22/23 evaluation cases)
- Delivered explainable, evidence-backed AI responses suitable for regulatory and compliance workflows

Asserto AI | *Backend Developer, AI Engineer* | February 2025 - August 2025 | Ho Chi Minh, Viet Nam

- Architected a no-code SaaS platform for LLM prompt evaluation supporting collaborative AI experimentation
- Integrated OpenAI GPT-4, Anthropic Claude, and MCP protocol for standardized multi-model evaluation
- Built scalable backend services using FastAPI and PostgreSQL to support rapid AI iteration
- Delivered production-ready AI demos including a scheduling agent and subtitle-based video editor

Rockship | *Backend Developer, AI Engineer* | January 2023 - April 2025 | Ho Chi Minh, Viet Nam

- Designed and implemented modular, event-driven backend architecture for Cosmo Agents AI workforce platform, enabling automated email personalization workflows
- Built Boireasy compliance system with FinCEN API integration, supporting 100+ concurrent users under stress-tested conditions
- Developed and maintained full backend infrastructure for Isense platform, transitioning from internship to full-time role
- Implemented fine-grained ACL and role-based permission systems to enhance platform security and maintainability
- Created SchemaGenius VSCode extension (2+ years marketplace presence) enabling low-code schema generation for production databases

SignalLab Trading Platform (Chosen as Sole Engineer)

- Selected as sole engineer from Rockship to design and implement a low-latency trading backend for SignalLab
- Achieved sub-second response times through Redis-based caching and optimized request pipelines
- Applied IsolationForest-based anomaly detection to improve system reliability and data-driven decision accuracy

Education

Bach Khoa University *2024*
Bachelor of Computer Science Ho Chi Minh, Viet Nam

- **Major:** Computer Science
- **Capstone Project:** Developed multi-tenant system for medical image-based disease diagnosis
- **GPA:** 3.0

IELTS Academic *2025*
Overall Score: 6.5

Selected Achievements

- **Open Source:** Creator of *monokai-pro.nvim* (500+ GitHub stars) and custom Neovim ecosystem (200+ stars)
- **AI Infrastructure:** Built AISync platform with plugin-based architecture for LLM experimentation and agentic workflows
- **Automation Impact:** Replaced multi-week manual QA workflows with single-day autonomous AI pipelines
- **System Design & Performance:** Delivered stress-tested backend systems supporting 100+ concurrent users
