PROFESSIONAL SUMMARY

Frontend Engineer with 4 years of experience shipping production web applications for real clients. Built and deployed a full-scale e-commerce platform for a premium Apple retailer, covering the storefront and admin dashboard, and owned it end-to-end from architecture through production. Designed a real-time clinic queue management system using WebSocket and Next.js that is live in an active clinic environment. Consistent track record delivering clean, maintainable UI across React with a focus on component architecture, state management, and frontend performance. Also comfortable extending products into React Native when a project calls for a mobile app.

CORE COMPETENCIES

Frontend: React.js, Next.js (App Router), TypeScript, JavaScript (ES6+), Tailwind CSS, Shadcn/ui, Radix UI, Material UI, Framer Motion, GSAP, Component Architecture, Performance Optimisation, SEO, Accessibility (a11y)

State & Data: Redux Toolkit, TanStack Query, Zustand, React Hook Form, Zod

Backend (Working Knowledge): Node.js, Prisma ORM, PostgreSQL, WebSocket, REST APIs, JWT Auth, Cloudinary

Tools: Git, GitHub, Vercel, Chrome DevTools, Figma, Agile / Scrum

Also (Plus): React Native, Expo, Expo Router, NativeWind, EAS Build, Android & iOS deployment

PROFESSIONAL EXPERIENCE

Frontend Engineer, Elegant Web Studio (elegantwebstudio.dev), Remote*January 2025 – Present*

- Develop and maintain React.js and Next.js applications across multiple client projects, owning components from design handoff through production deployment.
- Built a shared UI component library (buttons, tables, dialogs, and forms) using Shadcn/ui and Radix UI, standardising design patterns and reducing duplicated UI work across projects by ~20%.
- Implemented Role-Based Access Control (RBAC) interfaces and admin dashboard layouts supporting multi-level user permission systems for client-facing products.
- Participate in code reviews, flagging architectural issues and maintaining consistent coding standards across the team.

Frontend Developer (Contract), Al Jaami Technologies (aljaami.co.uk), Remote*April 2023 – December 2024*

- Delivered 4 production websites using React.js and modern CSS frameworks, handling requirements, implementation, and deployment for each project.
- Improved Lighthouse performance scores on legacy codebases by ~20–25% via lazy loading, component-level code splitting, and Next.js image/font optimisation.
- Integrated Framer Motion and GSAP for scroll-triggered and page-transition animations across all delivered projects.
- Continued delivering freelance work post-contract, including admin dashboards, reusable component systems, and Next.js web applications for independent clients.

Frontend Developer (Intern), Remostarts (remostarts.com), Remote*December 2022 – March 2023*

- Built admin dashboards and role-based portal UIs for internal tools using React.js.
- Implemented form validation using React Hook Form and Zod, covering both field-level and schema-level validation requirements.
- Contributed to sprint releases in an Agile/Scrum team, submitting pull requests and attending daily stand-ups.

PROJECTS

MacZen BD | Apple Premium Retail Platform | maczenbd.com

- Designed and built a production e-commerce platform for a premium Apple retailer in Bangladesh, a Next.js storefront and admin dashboard handling 1,000 to 1,500 daily website visitors, later extended with a React Native mobile app.

- Storefront includes product variant selection (colour, storage, configuration), cart and checkout flow, order tracking, EMI calculator, and Cloudinary-powered image delivery built for scale and maintainability.
- Admin dashboard supports full product management (CRUD with image upload), order processing, blog editor, and promotional offer management, all connected to a Prisma/PostgreSQL backend.
- As an additional surface, built a companion React Native mobile app (Expo SDK 53) with Expo Router, TanStack Query, Zustand, NativeWind, and Reanimated, released for Android and iOS via EAS Build, including an in-app chatbot connected to the live product API for real-time pricing and stock queries.
- Sole developer: responsible for architecture, implementation, deployment, SEO, and ongoing maintenance across all three surfaces.

Daktar Khana | Real-Time Clinic Queue System | doctor-tirthankar.vercel.app

- Built a clinic management system with online appointment booking and serial number assignment, a real-time waiting room display board, and a multi-role doctor/compounder dashboard, currently live in an active clinic.
- Implemented WebSocket-based real-time sync so that when a doctor advances the queue from the dashboard, all connected screens update instantly with the current and next patient names.
- Built a device-based rate limiting system (one appointment per device per day) and an ordered queue engine to prevent duplicate or out-of-order entries.
- Multi-role, password-protected RBAC supports two distinct roles, Doctor and Compounder, each with isolated views and permissions. Stack: Next.js, TypeScript, Prisma, PostgreSQL, WebSocket, Vercel.

scroll-animation-framer-motion | Open Source NPM Package | npmjs.com/package/scroll-animation-framer-motion

- Published a TypeScript utility package delivering scroll-triggered animations (fade, slide, zoom) for React applications, built on Framer Motion.
- Reached 1,200+ downloads within 6 months of release, with 100% automated test coverage maintained across all version updates.
- Designed a minimal, prop-based API requiring minimal configuration, built for developer adoption and ease of integration.

Fleet Stack | Multi-Tenant Fleet Management Super Admin Dashboard | fleet-stack.vercel.app/super-admin

- Built a Super Admin dashboard providing centralised oversight of administrators, vehicles, users, and license allocation across all managed accounts in a multi-tenant fleet platform.
- Implemented a live operations overview displaying real-time vehicle status breakdown (Running, Stopped, Inactive, No Data) alongside recent vehicle activity, transaction history, and user activity feed.
- Designed a notification and audit panel surfacing system-level alerts (offline devices, license quota warnings, maintenance schedules) and per-user action logs.
- Built key metric cards and an Adoption & Growth chart with 3M, 6M, 12M, and All-time views, using Shadcn/ui, Radix UI, ApexCharts, and Recharts.
