Gustavo Gutierrez

AI&ML/Fullstack Developer

São José dos Campos, SP, Brazil • gustavo.gtrz20@gmail.com • LinkedIn • GitHub

SUMMARY

Fullstack Developer focused on software architecture and scalable systems, with a solid foundation in Computer Science and hands-on experience building end-to-end web applications — from frontend to cloud infrastructure.

I work mainly within the TypeScript/Node.js ecosystem (NestJS, Next.js) and Python, developing everything from robust APIs and AI agents integrated with LLMs (OpenAI) to automations, chatbots, browser extensions, and open-source tools. I have hands-on experience with relational and non-relational databases (PostgreSQL, Prisma, Redis, MongoDB), asynchronous processing and queues (BullMQ, RabbitMQ, cronjobs), real-time communication (SSE, webhooks, websockets), observability (Grafana), and cloud infrastructure (AWS, Docker, Kubernetes, Terraform) — always with a focus on code quality, scalability, and solving real business problems.

Beyond the technical side, I place strong value on collaboration and knowledge sharing — experience I developed as a programming teaching assistant and through team projects. This allows me to contribute not only code, but also organization, technical clarity, and collective growth across the teams I work with.

I hold a degree in Systems Analysis and Development and am currently pursuing a Master's in Computer Science at the Institute of Computing, UNICAMP, with a growing focus on networking, distributed systems architecture, and modern backend service design — queues, APIs, and service-to-service communication. I continually seek to expand my technical expertise in applied AI and cloud computing, strengthening the robustness and impact of the solutions I build.

SKILLS

Langs & Fullstack: Python · Java · NodeJS · Express · FastAPI · HTML · CSS · Typescript · Tailwind · NestJS · NextJS · React

Data & AI: SQL · NoSQL · ScikitLearn · TensorFlow · Pandas · Numpy · ML · Excel

Cloud & DevOps: AWS · Docker · Kubernetes · Terraform · Serverless · CloudComp. · Linux

Database: MySQL · PostgreSQL · MongoDB · DynamoDB

Tools & Methods: Git · GitHub · Postman · Scrum · REST · SOAP · n8n · Actions

EXPERIENCE

Rapid Canvas - AI Engineer

Set 2026 – Atual • Austin, TX, United States • Full-time • Remote

As an AI Junior Engineer, I own the end-to-end customer lifecycle for AI solution adoption - from prototype to production - defining success criteria with stakeholders, leading discovery into engineering-level specs, coordinating cross-functional teams, overseeing platform configuration and human-in-the-loop governance, managing iterative feedback loops to refine models and drive continuous improvement, driving user adoption through training and change management, and tracking KPIs, ROI, and usage metrics while escalating blockers or scope changes.

Pronix - Full Stack Developer

Jan 2026 – Jul 2026 • Mogi Guaçu, SP, Brazil • Full-time • On-site

As a Full Stack Developer, I develop and maintain full stack applications using TypeScript, NestJS, Next.js, and PostgreSQL. I organize and track daily tasks with Feedz, build process automations and API integrations using n8n, and apply AI-powered tools to optimize development workflows. I also support system improvements, help define technical requirements, and assist the team to ensure scalable, reliable, and high-performance applications.

Pensacola Service - Budget analyst & Tech Solutions Developer

Ago 2025 – Jan 2026 • Campinas, SP, Brazil • Full-time • Hybrid

As a Cost Estimator, while also driving the digital transformation of budgeting processes. I combine financial analysis expertise with fullstack development skills to optimize workflows, automate tasks, and deliver more accurate results.

Compass UOL - AI&ML with AWS

Intern I July 2024 - December 2024 (6 Months) • São Paulo, SP, Brazil • Part-time • Remote

As an AI (Artificial Intelligence) and ML (Machine Learning) Engineer Intern, i actively engage in studying and executing daily tasks that involve leveraging advanced technologies such as Python, Javascript, Docker, Serverless applications and AWS. My work encompasses the use of the AWS environment for cloud-based solutions like Amazon EC2, Amazon S3, Amazon Lambda, Amazon API Gateway and a variety of artificial intelligence and machine learning tools in Python to develop and implement innovative projects.

Infonacci - Software Development

Intern I June 2022 - September 2022 (4 Months) • Mogi Mirim, SP, Brazil • Part-time • On-site

As an intern at Infonnaci for four months, I was involved in both customer service and ERP software development. During this time, I had the opportunity to assist clients directly, helping to resolve issues and gather feedback that informed system improvements. On the technical side, I contributed to the development and maintenance of ERP modules, which gave me hands-on experience with real-world business applications. To support my work, I took courses in Delphi and Firebird, deepening my understanding of the technologies used.

EDUCATION

Postgraduate I M.Sc. in Computer Science

UNICAMP I Campinas, SP, Brazil • 2025 - Currently

I'm currently taking graduate courses at the Institute of Computing at Unicamp as a special student in the Graduate Program in Computer Science.

Higher Education

FATEC I Mogi Mirim, SP, Brazil • 2020 - 2024

I've attended the Articulation of Secondary and Higher Education in Analysis and Systems Development.
GPA: 8.56/10

Secondary Education

ETEC I Mogi Mirim, SP, Brazil • 2020 - 2022

I've attended the Articulation of Secondary and Higher Education in Analysis and Systems Development.

Middle school

Colombia I Bogota • 2017 - 2019

I lived in Colombia, where I started attending bilingual schools and taking private classes in English and Spanish. In addition to common activities, I also took extracurricular classes in technical drawing and programming logic.
