Summary

Full-stack engineer with experience building data-serving APIs, React UIs, and async pipelines across large structured datasets, delivering clean, testable code across the full software development lifecycle.

Experience

Software Engineer May 2025 – Present
EzDataMunch *Remote*

- Modernized 5+ Angular and React dashboard modules, improving chat, collection, settings, and config workflows
- Unblocked feature validation with mock services and fallback data while backend APIs were incomplete
- Reworked legacy configuration screens into cleaner Angular layouts after identifying usability and data-flow gaps
- Owned debugging across frontend/backend boundaries, resolving API, env and build failures independently

Sr. Research Assistant | Software Developer Intern June 2023 – May 2025
George Washington University *Washington, DC*

- Led the full-stack migration of a legacy bioinformatics platform from Python CGI to a MongoDB/Flask/React arch
- Optimized MongoDB queries across 17M+ genomic records by implementing indexing strategies
- Tested 50+ Django and Flask endpoints using TDD and Pytest, maintaining consistent coverage and improving backend stability across iterative releases
- Automated release workflows using GitHub Actions CI/CD pipelines, reducing manual deployment steps and improving delivery consistency
- Built React data views for genomic search workflows, helping researchers scan mutation records faster

Associate Software Engineer Aug 2021 – July 2022
Menschen Consulting *Mumbai, India*

- Built Flask APIs for client-facing web tools to support CRUD flows, validation, and structured responses
- Supported AWS deployments with Lambda, S3, and IAM, troubleshooting during release and integration work
- Produced technical documentation covering API behavior, deployment steps, and tool workflows, supporting internal team onboarding and reducing knowledge gaps

Projects

AI Code Review & Analysis System | *Python, React, FastAPI, PostgreSQL, Async Processing, LLM Integration*

- Built an async FastAPI pipeline that unified four code input sources into a single non-blocking LLM review flow
- Implemented async background workers to poll review sections, persist partial results, and update progress
- Added idempotent database writes and worker-owned DB sessions so long-running review jobs could resume cleanly without duplicating categories or corrupting review state
- Designed a parser and PostgreSQL schema that converted raw LLM markdown into structured scores and findings

Revilo AutoCare Platform | *Flutter, WebSocket, Firebase Cloud Messaging, REST APIs, Dio*

- Engineered real-time dispatch flows for live assignment, provider location, OTP, and appointment updates
- Defined 40+ backend API specs turning incomplete product flows into clear implementation contracts
- Participated in code reviews, validating 80+ PR deployments against evolving product and API requirements

Education

The George Washington University - M.S., Computer Science May 2024

Don Bosco Institute of Technology - B.E., Computer Engineering May 2022

Skills

Languages & Frameworks: Python, JavaScript, TypeScript, SQL, React, Flask, FastAPI, REST APIs
Databases & Data: PostgreSQL, MongoDB, DynamoDB, NoSQL/relational design, query optimization
Cloud & Tools: AWS (Certified Developer Associate), Docker, GitHub Actions CI/CD, Git, Postman, Agile
